Summary

Computer Science Engineering student with strong foundations in data structures, algorithms, and core computer science subjects. Experienced in building full-stack web applications and management systems using modern web technologies. Hands-on experience with backend APIs, databases, and problem-solving through academic and practical projects. Passionate about software development and eager to contribute to real-world engineering challenges through innovative and scalable solutions.

Technical Skills

- **Programming Languages:** C, C++, Python, Java, JavaScript
- **Frontend Technologies:** HTML5, CSS3, React.js
- **Databases:** MySQL
- **Frameworks & Tools:** Node.js, Git, Visual Studio Code
- **Computer Science Fundamentals:** Data Structures, Algorithms, DBMS, Computer Networks, Operating Systems

Education

Bachelor of Technology in Computer Science and Engineering Vishwakarma Institute of Technology, Pune	Nov 2024 – Present CGPA: 8.64/10
Diploma in Computer Science Government Polytechnic College, Aurangabad	2021 – 2024 Percentage: 89.59%
Secondary School Certificate (SSC) Anant Bhalerao Vidya Mandir, Aurangabad	Percentage: 89.80%

Experience

Full Stack Developer Intern — Enovate Skill (Remote)	2023
• Assisted in developing web applications using HTML, CSS, JavaScript, and React for building responsive user interfaces • Integrated backend APIs and database functionality to support dynamic application features • Collaborated with team members to debug issues, optimize performance, and improve overall user experience	

Projects

VishwaCollab: Campus-Industry Connect Platform <i>Design</i>	GitHub <i>Full Stack Web Development, APIs, Database</i>
• Developed a campus-industry collaboration platform enabling resume generation, ATS-style resume scoring, and chat-based interview assistance • Designed backend APIs and database schema to manage user profiles, resumes, and career resources • Built responsive frontend interfaces to enhance user interaction and accessibility across devices	
Smart Expense Tracker using AVL Tree	GitHub <i>C++, Data Structures</i>
• Implemented an expense tracking application using AVL Tree to support efficient insertion, deletion, and search operations • Applied self-balancing tree algorithms to maintain optimal $O(\log n)$ time complexity • Designed features to record, update, and retrieve expense data efficiently	
Hospital Management System	GitHub <i>PHP, HTML, CSS, MySQL, XAMPP</i>
• Developed a hospital management web application to manage patient records, doctor scheduling, and billing operations • Designed and integrated a MySQL database for efficient storage and retrieval of medical data • Implemented modules for patient registration, appointment management, and record tracking	
Arya Cake Shop Website	GitHub <i>Python, HTML, CSS, MySQL</i>
• Built a full-stack bakery website with user authentication, product catalog, and order management features • Integrated a QR code-based payment system to enable secure and convenient transactions • Implemented MySQL database for storing product and order information	

Achievements & Leadership

- Vice President, ASCII Committee – Led student activities and organized technical events
- Infosys Springboard Certifications – Cyber Security, Cryptography, Network Fundamentals
- Participated in multiple college-level hackathons presenting innovative project solutions
